Title:	43 suspected dengue cases in Sattari villages in North Goa district, Goa			
Action By CSU, IDSP -NCDC	Information communicated to DSU – North Goa, SSU- Goa			

As many as 43 suspected dengue cases have been reported from five villages of Sattari despite health authorities stepping up measures to control the disease in the taluka. Two weeks ago, 30 dengue cases were reported at Koparde, Satode, and Bhironda, and the number has now risen to 43 cases, with one patient each in two more villages of Dhabe and Caranzol.

Workers from community health centre, Valpoi have been undertaking fumigation across several places in the taluka, and have also issued appeals to people to ensure that water is not stored in open containers.

The CHC team is also handing out leaflets to all households on measures to be taken to prevent the spread of dengue.

Sattari locals fear that cases would surge when monsoon commences. People have appealed to authorities to conduct fumigation operations not just in the houses of patients, but in all houses of the affected villages as well.

Valpoi CHC health officer Dr Abhijeet Wadkar is closely monitoring the situation and various teams have been planning measures and public awareness campaigns to tackle the further spread of dengue in the taluka.

Chairperson of Valpoi municipal council, Shezin Shaikh has also written to the health department to undertake fogging in all the 10 wards of the municipality.
