Title:	Pune records rise in dengue with 50 cases in 2 weeks, Maharashtra			
Action By CSU, IDSP -NCDC	Information communicated to DSU- Pune, SSU- Maharashtra			

In the last two weeks, Pune recorded a hike in dengue fever with 50 new cases being reported. As per the reports, as many as 200 cases of dengue and 72 of chikungunya have been confirmed by the health department of the Pune Municipal Corporation since January.

However, no deaths have been reported so far due to dengue. Around 972 suspected cases of dengue have been detected in the city from January to July.

The laboratory tests confirmed the viral infection in 193 cases. At the same time, the city has recorded 11 cases of H1N1 virus (swine flu) infection this year.

Due to seasonal changes, diseases such as influenza, and dengue, among others, are spreading across the city.

Dengue fever is mainly spread by the bite of infected Aedes mosquitoes. Usually, a mosquito becomes infected when it bites a person who has dengue in his or her blood. Direct spread of dengue from one person to another does not occur.

Symptoms of this disease include high fever, severe headache, pain behind the eye, joint pain, and muscle pain.

Some people also suffer from dengue hemorrhagic fever, which requires proper treatment by a doctor. It may also lead to loss of appetite, persistent vomiting, high fever, headache, difficulty breathing, and abdominal pain.

Sometimes, this also leads to shock and circulatory failure.

While there is no specific treatment for dengue, if a person becomes severely ill due to the virus, they are treated with intravenous fluids and oxygen therapy.
